Dr. Gerd Döben-Henisch
Dr. Mark Mattingley-Scott

We the team of the INM-Institute for New Media combine various technological, scientific and cultural interests in New Media with long term experiences and professional talents. We are looking for institutional sponsors, research and development project partners and sponsors for events, exhibitions and scholarships. Create with us your own individual cooperation programme!

The 18 years of history and the well-known name of the INM together with an attractive programme form the basis for a sustainable Institute Partnership. Besides the know-how transfer to your environment our premises and our logistics offer opportunities for unconventional (marketing) events.

The INM has a fine tradition in epistemological Basic Research, Applied Research and Development of Prototypes. In addition to interactive New Media Art there are software development projects in the range of simulation and modelling, interactive real-time simulations, agent systems and experiments in the data space. Implement your Research and Development Projects with us!

Due to its assistants and colleagues the INM has access to striking expertise and a great potential of experience in several subjects of New Media. We love providing you our knowledge and our talents for your investigation and the realisation of your own Publications or Workshops.

The INM perceives itself as a moderator and interpreter of developments around the New Media in art, science and application. We will gladly realise joint Events at the "Campfire of the Screenagers".

Our monthly "unplugged heads 2.0" are moderated discourses in dialogue with an interested public. Topics of R&D-projects or alternatively of fields of interest of the INM are discussed. Our annual Knowledge (Science) Salons are a mixture of target group appropriate and topical presentations and lectures or symposia as well as exhibitions combined with "get together" and "networking" elements.

The support of attractive Exhibitions regarding actual movements in art and science (e.g. "performative science") on an international level is an exceptionally chance to prove cultural engagement.

Creative heads need an exciting environment, love and security as well as free space in order to utilize their talents. Scientist/Artist in Residence programmes for post-graduated artists and scientists or Scholarships for several months, Traineeship and Apprenticeship Training Positions at the INM give us the possibility to benefit altogether from the input of fresh thoughts and ideas. The INM organises working environments and supporting events for your scholarships.

The appointment of Visiting / Endowment Professorships for independent scientists at the INM in New Media specific topics could also for you be an interesting option in comparison to a pure university professorship. A cooperation of the autonomous INM with an interested institution of higher education would be a promising alternative.

You are welcome to implement your Internet and WWW projects by the aid of the INM Consulting and Service Network team. Our network of freelancers and partners provides competent consulting and conception, realisation and maintenance skills for your web projects
